## 1. Background

### A. SYNOPSIS

My current research interests are in organic/hybrid and perovskite optoelectronics, bridging optical spectroscopy of materials to devices. In particular, our focus is on molecular and organic electronics –field-effect transistors and solar cells/photodiodes. Our research utilizes: (1) optical spectroscopic techniques such as Raman scattering, photoluminescence/absorption, modulation spectroscopy including high pressure studies and nonlinear optics; (2) organic device fabrication (spincasting, thermal evaporation, inkjet printing, modified pulsed laser deposition, and chemical vapor deposition techniques); self-assembly processes in bioinspired materials; (3) electrical characterization: current-voltage and capacitance measurements.
